

RISK ASSESSMENT REPORT

MANDATE DETAILS

Fund Name	Asia pacific
Strategy Type	buyout
Vintage Year	2026
Primary Analyst	Jones
Processing Date	February 05, 2026
Description	generate mandate criteria

OVERVIEW & ASSESSMENT

The assessment results indicate a uniformly low short-term compliance and operational risk profile across the three reviewed issuers: Microsoft Corporation, Salesforce, and HubSpot each passed all six evaluated checks and there were no critical parameter failures, yielding a 100% success rate. This pattern reflects consistent adherence to the evaluated risk controls and suggests robust governance and operational practices within this small sample, reducing idiosyncratic default or compliance concerns at the individual company level. However, the portfolio exhibits meaningful concentration in a single industry segment (enterprise software/SaaS), which increases exposure to sector-specific shocks such as demand cyclicality, regulatory changes for technology firms, or broad market repricing that would not be captured by pass/fail compliance metrics alone. Given the limited sample size, these findings should be interpreted cautiously; ongoing monitoring, periodic reassessment of the underlying control frameworks, and deliberate diversification outside the current sector are recommended to mitigate correlated downside risk. Overall, while current assessments support a low immediate investment risk view for the covered names, strategic portfolio diversification and active surveillance remain prudent to manage concentrated sector exposures.

EXECUTIVE SUMMARY

Metric	Value	Percentage
Total Companies	3	100%
Companies - SAFE	3	100.0%
Companies - UNSAFE	0	0.0%

KEY FINDINGS

1. All three companies passed every assessed parameter (100% success rate), indicating low immediate operational and governance risk. Consider maintaining or initiating positions while sizing allocations to match your portfolio risk tolerance.
2. Holdings are concentrated in large-cap SaaS/cloud leaders (Microsoft, Salesforce, HubSpot). Mitigate sector concentration by adding complementary sectors or defensive assets to reduce correlation risk.
3. No critical failures were detected, but investment decisions should focus on valuation and forward growth assumptions. Perform relative valuation and earnings-growth sensitivity analysis before increasing exposure.
4. Establish monitoring triggers (quarterly earnings misses, major regulatory actions, material customer churn, or macro-driven B2B spending slowdowns) and implement stop-loss or rebalancing rules to protect capital.
5. Adopt disciplined position-sizing and governance. Limit any single holding to a predefined portfolio cap and schedule regular (e.g., quarterly) reassessments to capture changing risk profiles or model updates.

DETAILED COMPANY ASSESSMENTS

1. Microsoft Corporation

Overall Assessment: ✓ **PASSED** | **Parameters:** 6 passed, 0 require attention

Parameter-by-Parameter Analysis:

Note: 6 additional parameter(s) met all mandate requirements and passed the assessment.

Investment Recommendation: **APPROVED** - Company meets all mandate requirements

2. Salesforce

Overall Assessment: ✓ **PASSED** | **Parameters:** 6 passed, 0 require attention

Parameter-by-Parameter Analysis:

Note: 6 additional parameter(s) met all mandate requirements and passed the assessment.

Investment Recommendation: APPROVED - Company meets all mandate requirements

3. HubSpot

Overall Assessment: ✓ PASSED | **Parameters:** 6 passed, 0 require attention

Parameter-by-Parameter Analysis:

Note: 6 additional parameter(s) met all mandate requirements and passed the assessment.

Investment Recommendation: APPROVED - Company meets all mandate requirements
