

RISK ASSESSMENT REPORT

MANDATE DETAILS

Fund Name	asia pacific
Strategy Type	growth
Vintage Year	2026
Primary Analyst	Pravin
Processing Date	February 05, 2026
Description	generate mandate criteria

OVERVIEW & ASSESSMENT

The assessment reveals a materially elevated investment risk landscape: all four companies analyzed failed one or more critical checks, yielding a 0.0% pass rate and indicating systemic non-compliance across the sample rather than isolated outliers. Pattern analysis shows Salesforce and ServiceNow each cleared most checks but failed a single critical parameter (5 passed, 1 failed), while Microsoft and Workday exhibit broader compliance gaps (4 passed, 2 failed), reflecting a mix of isolated and multi-dimensional vulnerabilities within the cohort. Critical-parameter failures are concentrated in business model complexity affecting three of the four firms which creates a substantive correlated exposure across the portfolio; regulatory/legal risk, governance quality, and vendor platform dependency each manifest as additional, company-specific risk vectors. Taken together, these findings point to elevated portfolio concentration risk driven by common structural exposures and insufficient mitigation through diversification, and they warrant prompt reassessment of position sizing, targeted due diligence on the identified failure areas, and prioritized remediation or hedging actions to reduce systemic and idiosyncratic downside.

EXECUTIVE SUMMARY

Metric	Value	Percentage
Total Companies	4	100%
Companies - SAFE	0	0.0%
Companies - UNSAFE	4	100.0%

KEY FINDINGS

1. Portfolio-level red flag: every reviewed company is rated UNSAFE (Success Rate 0.0%) pause new allocations or cut position sizes until remediation plans are presented and validated, and raise required return thresholds to compensate for elevated collective risk.
2. Business model complexity affected 3 companies require granular revenue and margin decomposition (recurring vs oneoff, customer concentration, contract length, professional services exposure) and run downside stress tests on subscription renewals and churn before committing capital.
3. Regulatory/legal exposure flagged for one company perform focused legal diligence to quantify probable fines, litigation reserves, and compliance remediation costs incorporate those potential liabilities into valuation sensitivity scenarios and covenant/price protections.
4. Governance weaknesses identified for one company demand board and compensation reviews, corrective governance actions (independent directors, clawbacks, transparency measures) or apply a governance discount to valuation and consider activiststyle engagement as a condition of investment.
5. Vendor/platform concentration risk detected evaluate thirdparty dependency (single cloud provider, key ISV or payment processor), negotiate contractual SLAs and exit/migration terms, model supplier pricing power into cashflow forecasts, and consider hedges or diversification requirements.

CRITICAL RISK PARAMETERS

1. **Business Model Complexity**
Impact: Affecting 3 company(ies)
2. **Regulatory Legal Risk**
Impact: Affecting 1 company(ies)
3. **Governance Quality**
Impact: Affecting 1 company(ies)

DETAILED COMPANY ASSESSMENTS

1. Salesforce

Overall Assessment: **X FAILED** | **Parameters:** 5 passed, 1 require attention

Parameter-by-Parameter Analysis:

1. Business Model Complexity [UNSAFE]

Assessment: Multi-cloud SaaS constitutes multi-platform complexity, breaching mandate's clean-model preference.

Note: 5 additional parameter(s) met all mandate requirements and passed the assessment.

Investment Recommendation: **REQUIRES REMEDIATION** - Address failed parameters before investment

2. Microsoft Corporation

Overall Assessment: **X FAILED** | **Parameters:** 4 passed, 2 require attention

Parameter-by-Parameter Analysis:

1. Regulatory Legal Risk [UNSAFE]

Assessment: Material antitrust and AI regulatory exposure requires mitigation.

2. Business Model Complexity [UNSAFE]

Assessment: Multi-segment platform complexity exceeds clean scalable mandate preference.

Note: 4 additional parameter(s) met all mandate requirements and passed the assessment.

Investment Recommendation: **REQUIRES REMEDIATION** - Address failed parameters before investment

3. ServiceNow Inc - 2024

Overall Assessment: **X FAILED** | **Parameters:** 5 passed, 1 require attention

Parameter-by-Parameter Analysis:

1. Governance Quality [UNSAFE]

Assessment: Independent board but lacks explicit full financial transparency required by mandate.

Note: 5 additional parameter(s) met all mandate requirements and passed the assessment.

Investment Recommendation: **REQUIRES REMEDIATION** - Address failed parameters before investment

4. Workday Inc - 2025

Overall Assessment: **X FAILED** | **Parameters:** 4 passed, 2 require attention

Parameter-by-Parameter Analysis:

1. Vendor Platform Dependency [UNSAFE]

Assessment: External cloud dependency present; single-vendor risk requires mitigation and further evaluation.

2. Business Model Complexity [UNSAFE]

Assessment: Hybrid SaaS plus services adds operational complexity; breaches mandate preference for clean models.

Note: 4 additional parameter(s) met all mandate requirements and passed the assessment.

Investment Recommendation: **REQUIRES REMEDIATION** - Address failed parameters before investment
