

RISK ASSESSMENT REPORT

MANDATE DETAILS

Fund Name	my full name -1
Strategy Type	buyout
Vintage Year	2026
Primary Analyst	my full name
Processing Date	February 05, 2026
Description	this is a comment

OVERVIEW & ASSESSMENT

This comprehensive risk assessment report covers the entire investment process across three critical stages:

1. SOURCING STAGE:

Identified and evaluated 29 potential investment opportunities across multiple sectors and geographies.

2. SCREENING STAGE:

Screened 2 companies against mandate criteria. 0 passed initial screening, 2 filtered out based on strategic fit and preliminary risk metrics.

3. RISK ASSESSMENT STAGE:

Conducted detailed risk analysis on 2 companies. 1 companies (50.0) met all risk parameters and passed assessment. 1 companies require attention due to parameter failures or risk mitigation needs.

EXECUTIVE SUMMARY:

The current assessment of the two-company sample yields a 50.0 success rate, indicating that while one issuer (SalesFX) met all checks, the other (Mars) failed a critical parameter; this small-sample outcome creates a materially elevated risk profile relative to larger, more diversified portfolios. Compliance patterns show a binary split rather than gradations of weakness: one counterparty demonstrates full adherence to the assessed controls, while the failed counterpartys deficiency is specific and systemic vendor platform dependency rather than a diffuse set of minor issues. Portfolio risk concentration is acute: with only two holdings, a single critical failure materially affects aggregate risk exposure and creates a potential single point of failure tied to thirdparty platform reliance. We therefore recommend targeted remediation and contractual operational mitigations for the failing issuer, strengthened vendor risk management and contingency planning, and prompt monitoring of remediation progress; absent such mitigations and improved diversification, the portfolios investment stance should be considered cautious and contingent on demonstrable risk reduction.

EXECUTIVE SUMMARY

Metric	Value	Percentage
Total Companies	2	100%
Companies - SAFE	1	50.0%
Companies - UNSAFE	1	50.0%

SOURCED COMPANIES

Company Name	Sector	Industry	Country
SalesFX	Technology	Software IT Services	US
Service Inc - 2024	Technology	Software IT Services	US
Workday - 2025	Technology	Software IT Services	US
Snow Inc- 2025	Technology	Software IT Services	US
HubSpot	Technology	Software IT Services	US
Orange Inc	Technology	Software IT Services	US
Mars	Technology	Software IT Services	US
Micro Corporation	Technology	Software IT Services	US

International Machines - 2024	Technology	Software IT Services	US
Techno Inc	Technology	Software IT Services	US
The Trade Desk	Technology	Software IT Services	US
Atlassian Corp Plc	Technology	Software IT Services	US
Zen, Inc.	Technology	Software IT Services	US
DXC Company	Technology	Software IT Services	US
VM, Inc.	Technology	Software IT Services	US
Cogs Solutions Corporation	Technology	Software IT Services	US
Fintech, Inc.	Technology	Software IT Services	US
National Information Services, Inc.	Technology	Software IT Services	US
Broad Financial Solutions, Inc.	Technology	Software IT Services	US
Affirm Corp, Inc.	Technology	Software IT Services	US
Leidos, Inc.	Technology	Software IT Services	US
FLEET Technologies, Inc.	Technology	Software IT Services	US
Zoommin Communications, Inc.	Technology	Software IT Services	US
Special Inc.	Technology	Software IT Services	US
Twilight Inc.	Technology	Software IT Services	US
DocAV, Inc.	Technology	Software IT Services	US
Okta, Inc.	Technology	Software IT Services	US
Strike Holdings, Inc.	Technology	Software IT Services	US
Elastic Corp	Technology	Software IT Services	US

SCREENED COMPANIES

Company Name	Status	Reason
SalesFX	Pass	DebtEquity ratio 0.1938 is less than the mandate threshold 0
Mars	Pass	DebtEquity ratio 0.0352 is less than the mandate threshold 0

CRITICAL RISK PARAMETERS

1. Vendor Platform Dependency

Impact: Affecting 1 company(ies)

RISK ASSESSMENT RESULTS

1. SalesFX

Overall Assessment: ✓ **PASSED** | **Parameters:** 1 passed, 0 require attention

Parameter-by-Parameter Analysis:

Note: 1 additional parameter(s) met all mandate requirements and passed the assessment.

Investment Recommendation: **APPROVED** - Company meets all mandate requirements

2. Mars

Overall Assessment: ✗ **FAILED** | **Parameters:** 0 passed, 1 require attention

Parameter-by-Parameter Analysis:

1. Vendor Platform Dependency [UNSAFE]

Assessment: Depends on third-party cloud and government infrastructure; indicates platform concentration risk.

Investment Recommendation: **REQUIRES REMEDIATION** - Address failed parameters before investment

KEY FINDINGS & INSIGHTS

1. Sourcing is heavily concentrated in TechnologySoftware (100 of the sourced universe) with 29 names but only 2 progressed to screening, indicating low conversion efficiency and a high sector-concentration risk diversify sector exposure and set sourcing-to-screen conversion targets.
2. The screening process appears overly narrow (principally DebtEquity thresholds) both screened companies passed on DE yet one later failed risk assessment; expand screening criteria to include vendorplatform dependency, revenue and customer concentration, profitability, cash runway, and operational KPIs.
3. Vendor platform dependency emerged as a critical, deal-breaking risk for at least one company; make vendorplatform dependency a formal early-stage screen with documented due diligence and minimum acceptable thresholds or mitigation requirements.
4. A 50 pass rate from risk assessment (12) with a single failure driven by a non-financial parameter reveals a gap between financial screens and operationalstrategic risk evaluation introduce a multi-dimensional pre-screen scorecard that balances financial and non-financial risks.
5. Portfolio risk concentration is understated: sourcing a single industry and tolerating single-vendor exposure increases systemic and idiosyncratic risk implement hard limits on sector exposure and single-vendor dependency per deal and across the portfolio.
